

Starke Arvid Lift8 3.0

Efficient plasterboard transport

#newproduct

The first Lift8 was developed at the same time as the Starke Arvid lifting system in the mid 1990's. It has been updated over the years and is now available as version 3.0. Starke Arvid has taken the best of the previous models and combined it into a model with new technical features. This includes a unique double bend in the pull handle that allows the Lift8 to fit in tight spaces without the handle sticking out, centred four-wheel steering provides a shorter turning radius, lighter weight gives easier operation and three adjustable board supports give stability.

Area of use

With the Lift8 you can easily transport a pack of plasterboard /sheet material, simply load the pack on by crane or forklift and transport the plasterboard to where you want it. Then raise the platform, position trestles underneath and lower the pack onto the trestles, the truck can now be moved out leaving the pack safe and secure on the trestles at a good working height.

Product highlights

- **New design double bend pull handle**
- **Centered 4-wheel steering**
- **Allows efficient and ergonomic handling of sheet material**
- **Can handle plasterboard packs up to 1200 kg**
- **Strong lightweight chassis**
- **New design gives reduced 1.6 m turning radius in both directions**
- **Extendable supports for transporting longer plasterboards and plasterboard delivered on pallets**
- **Options: Foldable supports**

The Lift8 is a central part of our now classic system that handles the plasterboard from truck to assembly site without the need for a single person to handle a single sheet. Profitability is often described as a 50 % labour cost reduction with the added benefits that the plasterboard is off the floor preventing damage and poor ergonomics.

Create effective flows by forklift loading the Lift-8 directly from the truck and transport the board to its location in the building.

Lift8 3.0 has new improved steering control that provides a narrow turning radius of 1.6 meters in both directions. Compact lightweight chassis with extendable supports perfect for transporting longer plasterboards.

Technical details

Art.no:	18900
Maximum load:	1200 kg
Width:	700 mm
Length excluding handle:	1725 mm
Length including handle:	2405 mm
Height:	580-730 mm
Distance between supports:	1635-2170 mm
Weight:	170 kg
Wheels:	Polyurethane filled
Options:	Foldable supports
